NATIONWIDE CASUALTY WATCH SURVEY BULLETIN

JANUARY 1998

Telephone: 0171 609 8405 Fax: 0171 700 1152
ACHCEW, Earlsmead House, 30 Drayton Park, London, N5 1PB

To: All CHCs

Subject: Nationwide Casualty Watch for the 26th January 1998

From: Association of Community Health Councils for England and Wales

RESULTS FOR 26th JANUARY 1998

Please find enclosed the Casualty Watch Results for 26th January 1998. This was a major initiative undertaken by ACHCEW with the assistance of Southwark CHC who are the organisers of the monthly Casualty Watch. One hundred and forty eight CHCs in England and Wales, and the four Health and Social Services Councils in Northern Ireland took part in the survey. They visited one hundred and ninety A&E departments.

LONGEST WAITS

The longest wait in A&E was recorded at the East Surrey Hospital where East Surrey CHC reported that a 60 year old male with severe asthma waited for a bed for 37 hours. The second longest wait was recorded at Charing Cross Hospital where Hammersmith and Fulham CHC reported that a 32 year old male patient with chronic renal failure waited for 27 hours and thirty eight minutes for admission for dialysis. The total number of patients recorded was 2,695 of which 1,145 (42%) were waiting for more than two hours.

	Trolleys	Beds	Chairs	All*
>12 hours	9	10	1	23
>4 hours	280	59	40	427
>2 hours	683	113	227	1145
<2 hours	605	40	726	1550
All	1288	153	953	2695

* This column is not the sum of the previous three columns since in some instances it was not noted whether a patient was on a trolley, bed or chair.

Admissions and Assessments Wards

Some of the longest waits were recorded in admissions and assessments wards. The recent development of these wards can be seen as in the interests of patients who would otherwise be waiting on trolleys. In some cases the patients in these wards will be receiving a high standard of care. However, placing a patient in these wards should not be equated with the patient being fully admitted to the hospital under the care of a consultant with the relevant expertise and in a ward with the appropriate facilities and nursing staff. Patients occupying beds in these wards have been included in the survey in accordance with information from A&E records that has been given to the CHC representatives.

At **St Richard's Hospital** Chichester, the A&E Assessment Unit is a "self-contained ward which has excellent nurse levels and is a focal point for the on-take specialty teams. The initiative was funded from the central 'Winter Pressures' funding and has made a significant quality improvement" (Letter to ACHCEW from Robert Lapraik, Chief Executive, St Richard's Hospital).

The **Medical Assessment Unit at Halifax** "provides an environment in which the patient can undergo thorough assessment and have any appropriate tests undertaken. The Unit is a 24 bedded ward and is fully staffed by qualified nurses and senior clinicians. At the end of the assessment process, the patient is either transferred to the most appropriate specialist ward or discharged. As such, it may be appropriate for some patients to stay on the ward for some time" (Letter to ACHCEW from Calderdale CHC).

Further Comments:

Torbay Hospital opened an Emergency Room Admissions Unit in November 1997 to facilitate the investigation of emergency patients requiring admission or short period observations. Patients are in screened 4-bedded bays away from the main casualty unit, giving privacy, dignity and comfort for patients.

At **North Staffordshire Hospital** there had been a trauma incident shortly after noon which meant that some doctors had to leave the department. This resulted in fairly long waits for patients in the afternoon.

At **Hillingdon Hospital** the area for the treatment of minor injuries was closed because of staff sickness which meant that the staff in the area for the treatment of major injuries had to work harder. One patient had to wait for 15 hours for a bed to become available on a male surgical ward.

At **Hammersmith Hospital** most patients were seen by a doctor relatively quickly but finding them beds caused problems. Staff shortages meant that there was insufficient cover to accompany patients to x-ray or other departments which increased delays. In addition, it has been reported that on several occasions lately, "a number of patients have been in A&E overnight which means that the early shift staff have to wash and feed them and do drug rounds in addition to caring for new admissions. New beds rarely become available before mid-afternoon so there is a constant pressure on the A&E unit especially if they start with 'over-nighters'. Many of the patients are very unwell and require a considerable degree of nursing care which the unit find almost impossible to provide when they are trying to deal with emergency admissions at the same time" (Note from Hammersmith CHC Member).

NO PATIENTS

It was reported that there were no patients waiting in the A&E Departments of: Llandrindod Wells Hospital, Buith Wells Hospital, and Ystrad Gynlais Hospital (Brecknock and Radnor CHC); Montgomery County Infirmary, Llanidloes War Memorial Hospital and Machynlleth Hospital (Montgomery CHC); Hexham General Hospital (Northumberland CHC); and Bishop Auckland General Hospital (South Durham and Weardale CHC).

ACHCEW wishes to express their gratitude to the CHCs who participated in the Nationwide Casualty Watch, Mary Horder, Malcolm Alexander, and Ellie Deveson from Southwark CHC, Vicky Nicholls from GLACHC and Lynn Eaton who acted as press officer to promote the project.
